

Code-Layout, Readability, and Reusability

Date: 1 July 2026
Team ID: XXXXXX
Project Name: AI Powered Marketing Persona Generator
Maximum Marks: 5 Marks

S.No	Quality Principle	Implementation Details / Description	Specific Project Examples (Files/Folders)
1	Folder/Directory Structure	Adopted a modular, feature-based architecture to separate business logic from the user interface, improving scalability.	/src/components, /src/services, /src/api
2	Naming Conventions	Strictly followed industry standards: camelCase for variables and functions; PascalCase for React components and class names.	generatePersona.js, PersonaCard.jsx, marketingDataState
3	Code Readability & Comments	Implemented JSDoc for all AI prompt engineering functions to clarify complex logic for team collaboration.	JSDoc headers in /utils/aiEngine.js
4	Modularity & Reusability	Applied the DRY (Don't Repeat Yourself) principle by creating generic, reusable UI components and helper functions.	PersonalInputForm.jsx and ResultDisplay.jsx reused across multiple views
5	Formatting & Linting Tools	Automated code consistency using Prettier for formatting and ESLint for enforcing quality standards and detecting potential bugs.	prettier.config.js and .eslintrc in the root directory
6	Error Handling Patterns	Implemented a centralized error-handling middleware to catch API exceptions and provide user-friendly feedback.	errorHandler.js in /middleware and try-catch blocks within API services
